

TECHNOLOGY STACK

Date	23 October 2025
TM ID	25TMID02573
Project Name	Project Management System
Maximum Marks	4 Marks

Technical Architecture :

The technical architecture integrates Salesforce modules for customer, service, and billing management using a cloud-based model. It ensures secure data flow, automation through Apex and Flows, and real-time analytics via dashboards.

Table-1 : Components & Technologies :

The Garage Management Project utilizes Salesforce technologies such as Apex, Flows, and Custom Objects to automate core operations. Each component—from customer management to reporting—works cohesively to ensure data accuracy, service efficiency, and secure role-based access within the cloud environment.

S.No	Component / Module	Technology / Tool Used
1	Customer Management	Salesforce Objects & Forms
2	Inventory Management	Apex & Salesforce Reports

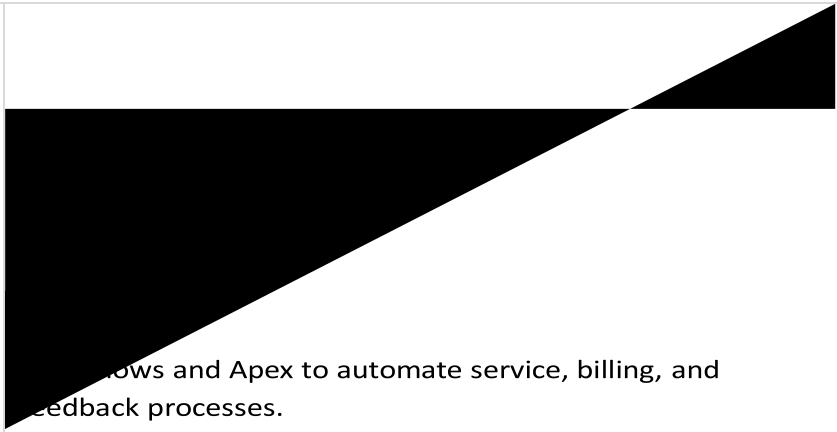

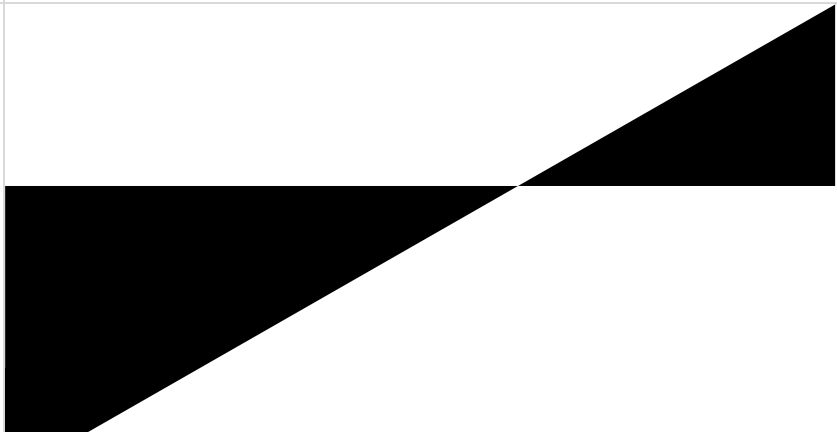

3	Service Booking	
4	Billing System	
5	Feedback Module	

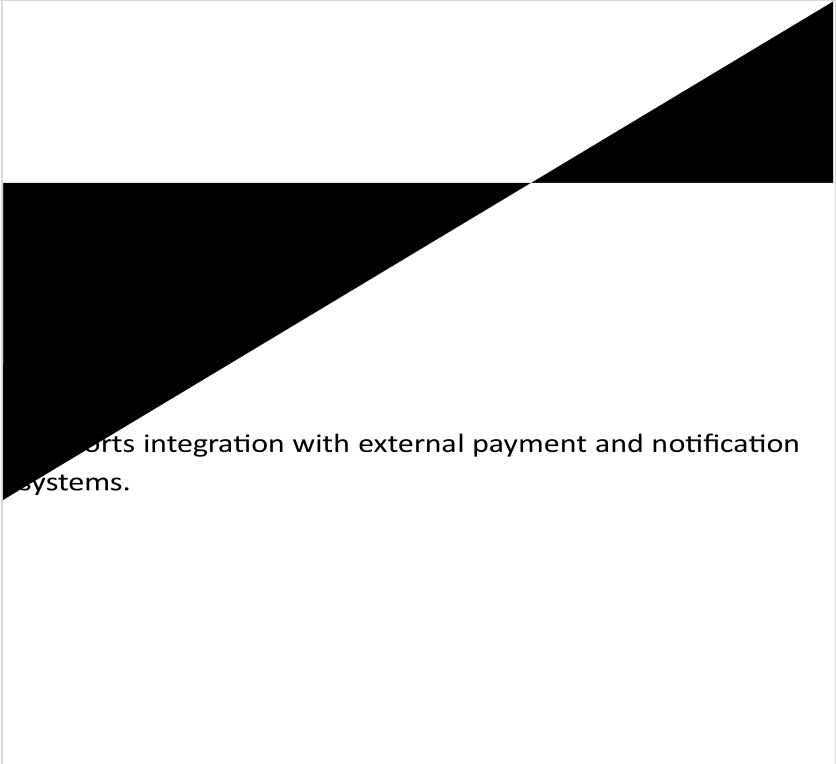

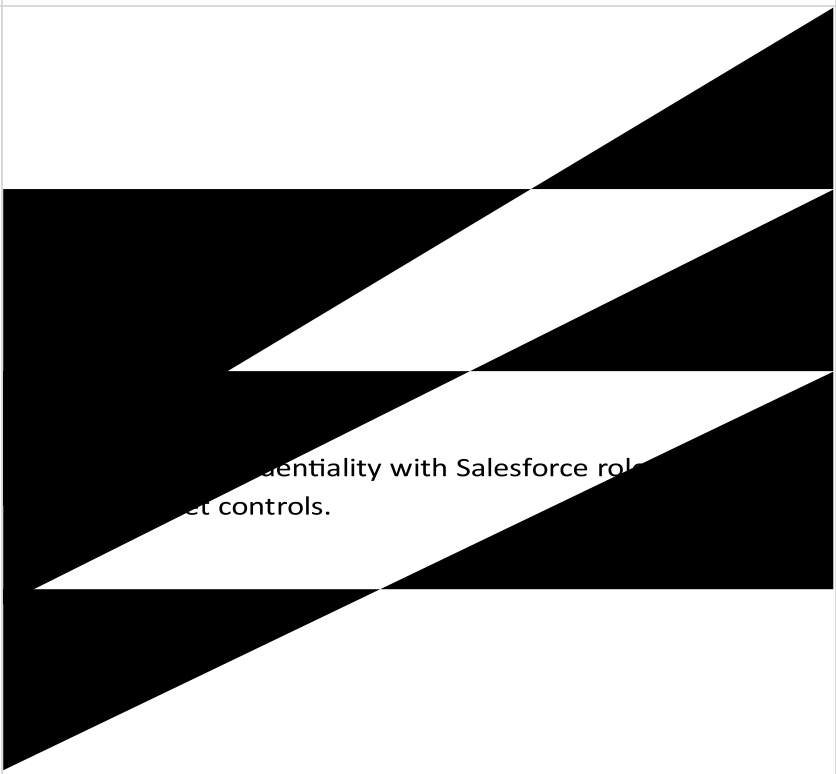

6	Reporting & Dashboard	Salesforce Reports & Dashboards
7	Security & Access Control	Role Hierarchies & Permission Sets

Table-2: Application Characteristics:

The Garage Management Project exhibits key characteristics such as scalability, automation, and security. Built on Salesforce, it offers real-time reporting, seamless integrations, and reliable data access, ensuring efficient and intelligent management of garage operations.

S.No.	Characteristic	Description
1	Cloud-based Platform	Built entirely on Salesforce, enabling anytime, anywhere access.

2	Automation	 <p>Apex</p> <p>Apex</p> <p>Apex grows and Apex to automate service, billing, and feedback processes.</p>
3	Scalability	 <p>Apex</p> <p>Apex</p> <p>Apex is easily adaptable to handle more users, vehicles, and services as business grows.</p>

4	Integration	 <p>Supports integration with external payment and notification systems.</p>
5	Security	 <p>Ensures confidentiality with Salesforce role-based access controls.</p>

6	Real-Time Reporting	Provides instant insights through dynamic dashboards and analytical reports.
